SKILLS

Programming Languages: CSS, HTML, Python, JavaScript
Tools / Platforms: Visual Studio Code
Databases: MySQL, mongoDB

PROJECTS / OPEN-SOURCE

Website e commerce *MySQL, PHP, CSS, JAVA*

- Backend Developer
- This e-commerce website for books is designed to allow users to easily and securely purchase books online. Key features include a vast book catalog, advanced search capabilities, and personalized recommendations. Users can create accounts, add books to their shopping cart, and proceed to encrypted payment transactions.

Merch IPB University

- Fullstack Developer
- This e-commerce website is specially designed for the sale of IPB University merchandise, offering a platform where students, alumni, and supporters can purchase official apparel and accessories. The site features a diverse selection of merchandise, including T-shirts, hoodies, caps, and more, all adorned with IPB University branding. Users can easily navigate through categories, use search tools to find specific items, and view detailed product descriptions and images.

SneakerScout

HTML, CSS, JavaScript

- Frontend Developer
- This website is a dedicated sneaker information hub, designed to showcase the latest sneakers on the market. It is not an e-commerce platform but serves as a valuable resource for sneaker enthusiasts who want to stay updated with the most current releases. The site features high-resolution images and detailed descriptions of each sneaker, ensuring users have all the information they need. Additionally, to facilitate convenient shopping, the website provides three links to external sneaker websites where users can compare prices and purchase the sneakers. This feature saves users time by eliminating the need to visit multiple sites individually, offering a one-stop solution for finding the best and most affordable sneakers available.
